» Behavioral Health & Tobacco Cessation:
Work Group Meeting

» Agenda

10:00 - 10:15

Introductions/Warm up

10:15 - 10:20

Project name

10:25 - 11:15

Follow up on assessment questions

11:15 - 11:20

Socialize Collab Space

11:20 - 11:30

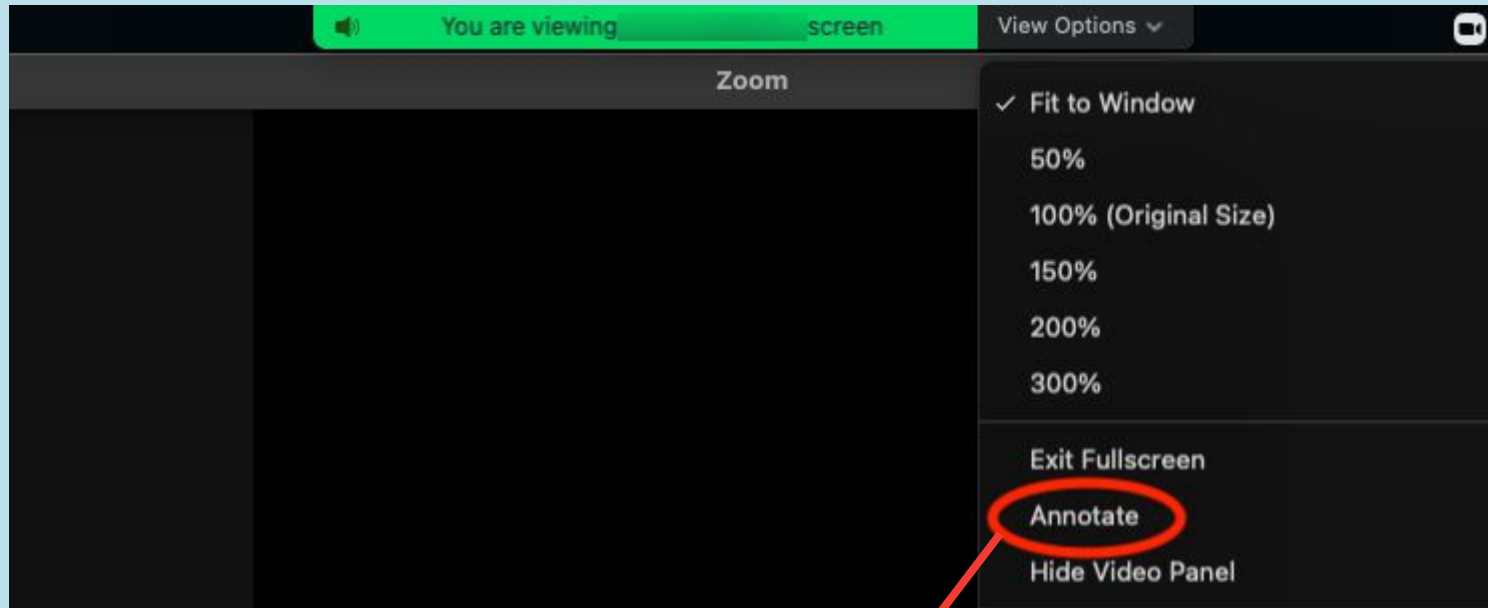

Identify next steps

» Introductions

- Name
- Pronouns
(if you choose to share)
- Organization

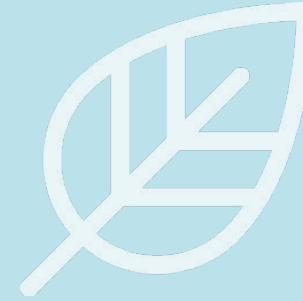

» Zoom's Annotate function

» This or that warm up: Fall

Using Annotate, place a stamp or mark next to which you prefer, the item on the right or left side

Flannels

Sweaters

Watch a movie

OR

Read a book

Soup

Chili

» **Name of project**

What is was:

Tobacco Cessation for Behavioral Health Populations

What we're thinking:

- Nicotine Recovery in Behavioral Health
- Nicotine Treatment and Recovery
- Behavioral Health Solutions for Nicotine Treatment and Recovery

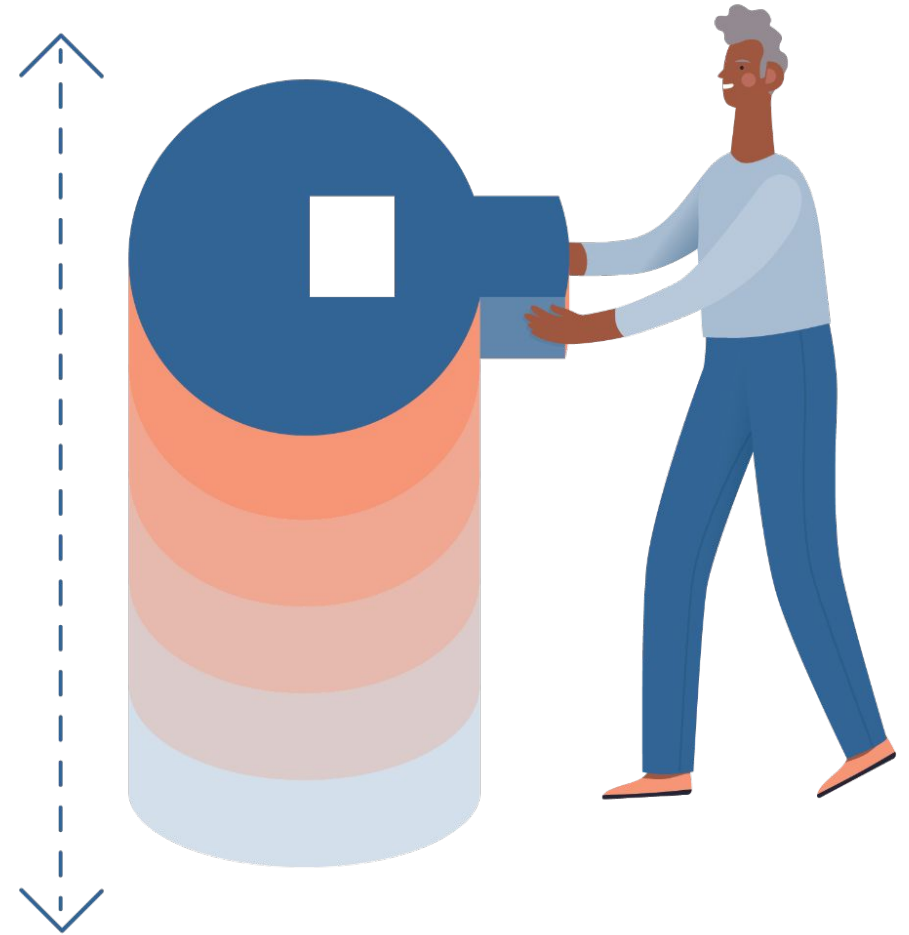

» Assessment focus progress to date

» Expanded project scope

Based on feedback from this panel, OHA has identified funding (in one of their CDC grants) to support a more robust assessment.

In the next 13 slides we will share ideas for addressing Expert Panel Assessment questions through deliverable in the original and expanded scope of work.

» Question 1

What do we know about how the current system for diagnosing and treating nicotine dependence for people with SUD and mental health issues is working? For example, among adults receiving treatment for substance use disorders or mental health conditions how many (or what proportion) are also receiving nicotine dependency treatment?

Can this information be broken down by age, gender, and racial/ethnic, and disability characteristics to look for differences?

What other information can we find specific to how many people in the target population are getting treated for nicotine dependency? For adults and for youth?

Update

OHA is contracting with Rede to conduct an assessment with outpatient SUD facilities. Through this assessment, Rede will gather information about how SUD facilities are diagnosing and treating nicotine dependence. We will also assess practice and systems challenges (e.g., payment).

Rede/OHA will exhaust all options to mine administrative databases (NSDUH, APAC, etc.) to find more detailed information

» Question 2

How do providers bill for nicotine dependence treatment and how can that be made easier for them?

Update

This topic is included in the literature and practice review. Beck and Alana are currently researching

» Question 3

Reimbursement rates are too low; what would it take to change them?

Update

Rede will conduct policy research to inform answers to this question. Beck and Alana are currently researching

» Question 4

The system has made it v. difficult for CBOs (or any other “non” traditional providers to do this work (and get paid); why is it set up that way? What would it take to change this?

Update

Rede will conduct policy research to inform answers to this question. Beck and Alana are currently researching

» Question 5

Nicotine dependency is not a primary billable diagnosis in substance use treatment; what would it take to change that?

Update

Rede will conduct policy research to inform answers to this question. Beck and Alana are currently researching

» Question 6

Providers need more information/education about motivating clients to stop using tobacco/use the quit line and what the best treatment options are for clients/consumers. How can we do this?

Update

- This topic is included in the literature and practice review
- OHA conducted formative research earlier in 2021 that may inform this topic
- OHA\Rede can provide a comprehensive overview of what is happening now nationally and in Oregon to support providers

» Question 7

What do we know about the efficacy of in-person vs online and telephonic treatment? If providers and tobacco-users think that “in-person” is the most or only effective method, how is that impacting motivation?

Update

This topic is included in the literature and practice review.

This topic can also be included in qualitative research

» Question 8

What information exists about culturally specific best-practices (for BIPOC, LGBTQ, immigrants, people with physical disabilities and other marginalized populations)?

Update

This topic is included in the literature and practice review. Alana and Beck are currently researching

» Question 9

How can we continue to shift the cultural norms within this population? Is it still pretty normative to smoke? What more can we do with policy and other environmental supports?

Update

- OHA is funding a qualitative research project to understand needs and conditions for Behavioral Health Providers. This research can be used to inform this question
- The assessment described on line 1 (above) will also assess policy and environmental supports

» Question 10

How can we incorporate peer to peer models into nicotine dependence treatment and recovery and the workforce?

Update

This topic is included in the literature and practice review. Alana and Beck are currently researching

Rede is working with OHA to incorporate additional research into expanded scope of work.

» Question 11

What can we learn about how we are working and coordinating with the integrated healthcare system (PCPs, etc). How can this be improved?

Update

TBD

» Question 12

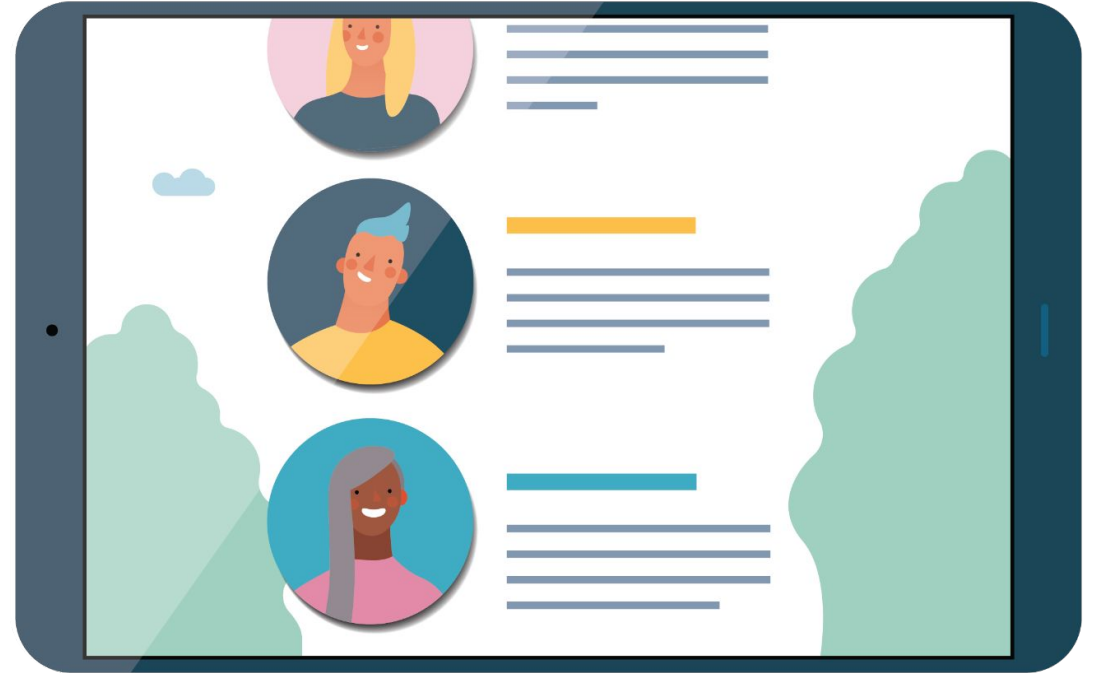

How do we ensure that youth in the target group are considered and fully supported?

Update

TBD

» Expert Panel Role: First Phases of Assessment

- Continue to advise and advocate at the project design level
- Champion survey distribution
- Review surveys and data collection plans to ensure they are appropriate for the audience
- Interpret data
